

Evgenii Zaitsev

Product Manager · Internal products · Founder

zajcev.evgenij42@gmail.com | LinkedIn | Telegram

Saint Petersburg · Russian / English · Technical background

At Samolet, I lead two CRM products: the agent workspace and the sales team lead panel. At EmTalk, my team and I brought two Android apps to release. My strength is finding common ground with users, engineers and business stakeholders.

Experience & responsibility

Samolet | Apr 2026 - present

Product Manager · Internal CRM products

The sales team lead panel and agent workspace in an internal CRM ecosystem.

- Research real agent and team lead workflows through interviews and feedback.
- Work with UX/UI and engineering to take changes from idea to release.

EmTalk | Feb 2023 - present

Founder / Product Owner

Research, strategy and team coordination. BRET and Decision Matrix are published on Google Play; a website offers tests and articles.

- Defined product strategy, requirements, backlog and priorities.
- Conducted user, market and competitor research; prepared business model and GTM materials.

Freelance / Project engagements | Jun 2023 - Nov 2024

Project / Product Manager

Product and project engagements. At Kickidler: roadmap and prioritisation. Other work included MVP concepts, requirements and coordination of technical changes.

- Kickidler: RACI, MoSCoW, roadmap, feature and architectural improvement work.
- Prepared a digital product concept and MVP requirements; implementation stopped when funding ended.

Statistics & Control / Statcontrol | Jul 2019 - Feb 2023

Technical Product Owner / Project Manager

Team and delivery coordination, requirements, risks, presales and internal process improvement.

- Managed cross-functional work on industrial IT solutions and client collaboration.
- Introduced Kanban and task evaluation, improved feedback and engineer onboarding.

Gazprom avtomatizatsia | Oct 2017 - Jul 2019

Team Leader

Control software for gas compressor units and coordination of project work.

- Developed control software; contributed to commissioning, FAT and SAT.
- Coordinated the team and delivery, prepared project documentation.

Product stories

Samolet: CRM for the work people do every day

Two products in an internal CRM ecosystem: the sales team lead panel and the agent workspace. The focus is on speed, usability and clear workflows.

Context

Agents need usable tools for daily operations. Sales team leads need a transparent view of their teams and sales pipelines.

My role and actions

I lead product development from workflow research to shipping changes. I conduct interviews, gather feedback and refine the backlog. I work with UX/UI on interfaces and align direction with stakeholders.

Metrics I work with

Adoption, conversion, handling time and CRM data quality. These connect the daily workflows of agents and team leads to product priorities.

What this experience demonstrates

Working with internal users, aligning business needs with everyday operations, and connecting discovery with delivery.

EmTalk: from research to two apps

I build a project focused on mental well-being and decision-making. Together with the team, we moved from customer discovery to BRET, Decision Matrix and a content website.

Starting point

Started with user and market research: customer discovery interviews, competitor analysis and team formation. The goal was to identify useful ways to support well-being and decision-making.

My role and actions

Founder and product lead: strategy, market and competitor research, requirements, backlog, prioritisation and team coordination. I prepared the pitch deck, investor materials and a go-to-market plan.

From research to release

Together with the team, brought BRET and Decision Matrix to publication on Google Play. The EmTalk website offers five tests and nine articles, including an article with an audio version.

The products

BRET brings together well-being practices. Decision Matrix helps compare options: its official listing describes categories, Pros & Cons, decision history and AI suggestions for alternatives.

What this experience demonstrates

Founder experience across the product cycle: research, strategy, team coordination and release. My contribution is product and organisational work; the apps and website are a team outcome.

Systems, teams & approach

Kickidler: Priorities and team collaboration

Context

Software for employee activity monitoring. Worked as Product Manager from July to November 2024.

My role and actions

Introduced RACI and MoSCoW for ownership and prioritisation. Introduced a roadmap and worked with the team on the testing module and architectural improvements.

What this experience demonstrates

Product prioritisation and attention to how teams make decisions and deliver changes.

Statistics & Control: Turning complex systems into manageable work

Context

Worked on industrial IT and automation solutions. On OptiRamp, I contributed to client communication, problem discovery, solution design, implementation and testing.

My role and actions

Coordinated the team and delivery; worked on requirements, risks and presales. Introduced Kanban, task evaluation, feedback and engineer onboarding processes. Prepared proposals for organisational transformation.

Connection to today's work

This experience helps me understand complex workflows, collaborate with engineering teams and connect requirements to business needs.

Skills & tools

Tools: Jira, Confluence, Figma, Miro, Notion, ClickUp, Trello, PostgreSQL; basic Python. Russian: native. English: self-assessed B2+/C1.
